

Heavenly Scent® Features

10 incredible Features of the Heavenly Scent® Ionizing, Ultrasonic Aromatherapy diffuser

- 1. COLD AIR DIFFUSION METHOD** No heat is used in the ultrasonic diffuser diffusion process. Heat can cause the rapid evaporation of the more volatile components of an essential oil resulting in a loss of the fullness of the natural aroma and its healing benefits. Heat can alter or destroy certain constituents of an oil and thus the therapeutic benefit may not be as optimal as using cold air diffusion method.
- 2. INSTANT VAPOR TECHNOLOGY** Incorporating the Instant Vapor Technology, you instantly enjoy the benefits of aromatherapy. This is the most powerful and therapeutically effective means of dispersing essential oils into an extremely fine mist of micro-particles and billions of molecules without heat for maximum benefits.
- 3. INCORPORATING THE PATENTED "DIFFUSION METHOD TECHNOLOGY"** Most Nebulizer manufacturers do not recommend the use of thick essential oils such as Patchouli, Sandalwood or Ylang Ylang due to the fact that they can clog the nebulizing diffuser's injector and ruin the motor. Our Ultrasonic Diffuser advanced diffusion technology breaks down thick essential oils into tiny micro particles, leaving no oil residual mess to clean up.

- 4. BUILT-IN INTERVAL TIMER** – This diffuser offers a state-of-the-art innovation that incorporates a two-way switch, allowing you to continuously fragrance your environment or switch to intermittent cycles (e.g. 15 seconds on 30 seconds off) to maintain aromatic pleasures while saving precious oils. Over time our nervous system adapts to continuous scents causing awareness of the aromas to be lost. The cyclic administration of this diffuser heightens the experience of the fragrance and strengthens its biological effect. Essential oils diffused this way will produce the best results if the diffusion has a built-in interval timer.

- 5. THE HEAVENLY SCENT® DIFFUSER IS AN EXCELLENT WAY OF PURIFYING THE ENVIRONMENT** as well as administering the uplifting, rejuvenating, or relaxing effects of selected oils or blends to a group. Creating a desired atmosphere can increase productivity and positive attitudes. E.g. During classes or at work use a Colour Energy "Yellow" mentally stimulating oil such as Rosemary or Bergamot. These oils help keep people more alert and mentally sharper.
- 6. ULTRASONIC AROMATHERAPY DIFFUSION IS VERY EFFECTIVE AGAINST AIRBORNE BACTERIA AND MOLDS.** When essential oils are diffused in an area, they have the ability to increase the atmospheric oxygen as they release oxygenating molecules into the atmosphere. Oils increase ozone and negative ions, which inhibit bacteria growth.
- 7. PREVENTS ILLNESS** In the home or work environment, the therapeutic effects of diffused oils on the respiratory systems are especially helpful during the cold and flu season. Try Colour Energy's Eucalyptus, Pine or Peppermint oil. Disperse over a period of several hours to keep the environment clean of nasty airborne viruses.
- 8. REDUCES POLLUTION** When outside air is polluted, our diffuser can help create a safer, more peaceful and uplifting atmosphere indoors. This prevents and destroys existing odours from mold, cigarettes, animal dander, etc.
- 9. NO EXPENSIVE REPLACEMENT PARTS** No need to invest extra money in expensive glass nebulizer replacement parts that typically cost between \$35-40. Statistically this is the one part that people have inadvertently broken with these types of diffusers.
- 10. EASY TO CLEAN** The cleaning of other diffusers can be difficult and time consuming. Nebulizer systems must be cleaned after each use, and glass nebulizers are fragile and must be handled with extra care. Oils that are put directly into the base unit or that have been heat diffused become thick and difficult to clean from the unit. The Heavenly Scent® Diffuser is easy to clean. Simply wipe out the inside base unit and replace the refill cup regularly. No mess or fuss.
